EXPLORE OUR ENTIRE PORTFOLIO OF JARS AND COMPONENTS

**Straight Sided Jars (JSS line)**

These straight-sided wide-mouth plastic jars are usually the least expensive & most economical option. For our polypropylene (PP) and crystal styrene (CS) straight sided jars, the cap does not fit perfectly flush to the jar; there is a slight "top hat" look with the jar & closure.

**PET Seamless jar (JBZ)**

Our polyethylene terephthalate (PET) seamless straight sided jars are widely used in various markets, and the cap sits perfectly flush onto the jar for a sleek and very sustainable option.

**Double Wall Jars (JDD/JDS line)**

These PP jars are 2 parts assembled together to give you a flush fit with your cap, without the high cost of a heavy wall jar. We offer both a straight and domed style. This is a high-end jar widely used for lotions, creams and hair gels. These jars typically appear larger than the volume of product they hold to maximize shelf presence.

**Frosted/Matte Options**

Olcott manufactures select sizes of polypropylene double-wall jars and closures with IN MOLD matte/frosting (some refer to as "soft touch"). This provides a no-gloss option that is done in the mold itself without any secondary process. To see which jar sizes are available with this feature, see the IMF Straight Base category in the chart above.

**Style Line Jars (JSL)**

These jars have a body cavity that is slightly wider than the interior dimension of the molded neck. This is a semi-flush fit jar, often found in a box on a shelf, for a substitute to heavy wall and double wall jars. PP Style Line Jars: 2oz 63-400; 2oz 70-400; and 16oz 70-400. HDPE Style Line Jars: 2oz 63-400 and 32oz 89-400.

**Profile Jars (JPS line)**

These jars use mold technology with an undercut to provide a flush fit to the cap, with a single wall option. This provides a flush fit to the jar for a high end look without the weight of a double wall jar. PP Profile Jars: 12oz 89-400 and 16oz 89-400.

**Heavy Wall Jars (JHS, JHT)**

These jars are the heaviest options in our portfolio, and molded from a single piece of plastic for a "premiere" look & feel. The caps fit flush on the jar for a substantial and stylish option. Limited sizes available in both straight sided & tapered styles. PP Heavy Wall Straight Jars: 0.5oz 43-400; 3oz 58-400; 3oz 70-400; and 6oz 89-400. PP Heavy Wall Tapered Jars: 1oz 43-400 and 4oz 63-400.

**Cosmetic Jar Disc Liners**

These PP inserts create a barrier between products and container lids, so the consumer doesn't have an unpleasant surprise each time they open the jar. This provides a luxury appeal and also helps prevent evaporation of the ingredients.

**Tapered Multi Lead Tub**

Deli tubs with a threaded closure. Offers a unique shape on the shelf with some weight savings. Nested containers maximize shipping efficiency. PP Tapered Multi Lead Tubs: 16oz 92mm and 32oz 109mm.

**Straight Sided Beaded Vial**

Beaded vials are used for tablets and powders. An internal seal between vial and closure offers a better seal than traditional packages. PP Beaded Vials with PE closure: 0.3oz 24-400 and 1oz 33-400.

**Jewelry Basket**

Four sizes of jewelry baskets are available in a sinking or floating material for customer convenience, for cleaning of jewelry and small parts. PP Jewelry Baskets: 3oz 70-400; 4oz 70-400; 6oz 70-400; and 8oz 70-400.
