

## INTRODUCING PRETIUM'S PATENTED **TETHERED CLOSURE SOLUTION TO THE EUROPEAN DAIRY INDUSTRY**

Pretium Packaging has introduced an integrated bottle and closure solution for dairy packaging up to 3 liters. The patented tethered cap solution includes a special tapered neck design of the primary package that engages with the tethered cap component for reliable performance. The tethered closure solution complies with a 2019 European Union directive that will require all single-use plastic beverage containers to have caps and closures that remain attached to the primary package during and after use. Tethered caps will become mandatory in the EU from July 2024 for all plastic beverage containers up to 3 liters in capacity.

**189ml, 250ml, 500ml, 1 pint, 1 liter, 2 liters & 3 liters with  
the 38mm custom tethered closure are available**

### ADVANTAGES OF OUR PATENTED **DAIRY PACKAGING SOLUTION**

- **Consumer-friendly, easy-to-use design.**
- **Uses current wipe-on technique for cap application** (no new equipment required).
- **Requires no filling line modifications or capital investments for dairy processors.**
- **Is available for all standard bottle sizes in the dairy market.**

CS-NL@PRETIUMPKG.COM

*According to the EU definition, tethered caps remain attached to the bottle after opening & during the product's life cycle & disposal. Plastic closures and lids used for beverage containers are among the single-use plastic items most frequently found as litter on the beaches of the European Union.*

*Therefore, the placing on the market of single-use plastic beverage containers should only be allowed if they comply with certain product design requirements in order to significantly reduce inputs of plastic container closures and lids into the environment.*
